PEONY (Paeonia)

This charming flower has no rival. For the border or as a cut-flower it stands majestically alone. In the list below we offer you what we believe to be the best that can be had for the money. American Peony Society ratings are given, also the names of originators.

Fall is the best time for planting Peonies. The ground should be spaded up to a depth of 18 to 24 inches and fertilized with a mixture of one part bone-meal and four parts pulverized sheep manure; if these are not easily obtained, use well-rotted cow manure. Place the roots so that the crowns are 2 inches below the surface. Each fall apply a mulch of shredded cow manure, and when the buds are formed in the spring, applications of liquid manure will produce better blooms. Peonies are gross feeders and should be well supplied with quickly available plant-food, especially in the fall when new root-growth is made.

WIZARD TRADE BRAND MARK PULVERIZED Sheep Manure

Everybody can get wonderful results with Wizard because it is easy to apply and will not burn plants. It is most economical—One big 100-lb. bag equals a whole wagon-load of stable manure. Ask for Free Circular. 5 lbs. 30 cts.; 10 lbs. 55 cts.; 25 lbs. \$1.25; 50 lbs. \$1.75; 100 lbs. \$2.75.

Wizard for Lawns

Wizard is absolutely weedless, easily applied and just what nature needs to make plants grow.

In making new lawns, pulverize the surface soil well and broadcast at the rate of 6 to 10 lbs. per 100 sq. ft., raking well into the surface soil. Sow seed and roll.

For renovating old lawns, use 6 lbs. per 100 sq. ft. and rake into the surface soil previous to sowing seed.

Flower Beds and House Plants

Wizard can be used dry or as a liquid manure. It is uniformly pulverized and can be used in a fertilizer drill. For top dressing use 6-10 pounds per 100 square feet. As a liquid manure use one pound to five gallons of water. Application every ten days to two weeks will prove very effective.

Vegetables

Wizard is recommended by expert gardeners for all vegetables, especially for radishes, lettuce, onions, cabbage, early potatoes, etc. For growing luscious fruits, berries and melons it is unsurpassed.

Applications can be made broadcast after plowing and harrowed into the soil at the rate of 1,000 to 1,500 lbs. per acre. If used in the drill at planting time, use 700 to 1,000 lbs. per acre. Side application later in the season will be found very profitable.

We recommend the use of one part of Bone Meal to four parts of Sheep Manure.

We do not pay transportation on bulk seeds, fertilizers, or garden supplies. In ordering heavy parcels, please specify whether freight or express shipment is preferred.

CITY DELIVERY. We maintain delivery service to all parts of the city for delivery of heavy parcels. Customers will avoid delay and disappointment by anticipating their needs. Special trips are costly.

NON-WARRANTY. There are so many elements entering into the success or failure of crops, such as soil, weather, and cultural methods, that, in common with most reputable seed-houses, we give no warranty, express or implied, as to description, purity, productiveness, or any other matter of any seeds, bulbs, or plants we send out, and we will not be responsible in any way for the crop.
